

MATHEUS ABRANTES

Manufacturing Engineer Intern | Mechanical Engineering Student

+55 11 9 4252-8746 | contato@matheusabrant.es.com

linkedin.com/in/mtabrant.es | matheusabrant.es.com

EDUCATION

Federal University of São Carlos, UFSCar

Bachelor of Engineering in Mechanical Engineering

São Carlos, SP, Brazil

March 2025 - December 2029

São Paulo's State Technical School

Game Development Technician

São Paulo, SP, Brazil

February 2022 - December 2024

SKILLS

Design Softwares: SolidWorks, Autodesk Inventor, Fusion 360, Siemens NX

Programming Languages: Python, C, MatLab, JavaScript, SQL

EXPERIENCE

Manufacturing Engineer Intern

Nexrmed

April 2026 – Present

São Carlos, SP, Brazil

- Redesigned projects focused on manufacturing optimization.
- Developed specialized fixtures and devices to enhance production quality and efficiency.
- Mapped production workflows and conducted time studies to identify bottlenecks.

Software Developer Intern

Focus Têxtil

February 2024 – March 2025

São Paulo, SP, Brazil

- Built and maintained scalable full stack applications using React, Next.js, NestJS, and ASP.NET.
- Rebuilt internal company systems from scratch, improving performance, usability, and maintainability.
- Implemented and improved UI/UX designs to enhance usability and user experience.
- Designed and maintained CI/CD pipelines using Azure DevOps to automate deployments.
- Modernized and refactored legacy systems, reducing technical debt and improving code quality.

Head of Development

FromHel Studio

April 2024 - January 2025

São Paulo, SP, Brazil

- Managed 6-person team, assigning tasks and ensuring timely project deliveries.
- Defined execution strategies and projects architectures for both web and game development.
- Represented the company at events, building connections and presenting products.
- Managed business-related responsibilities, contributing to the company's growth and direction.

EXTRA-CURRICULAR

- Project Consultant at Engrenar Jr.

April 2025 – April 2026

Developed CAD models and technical documentation for mechanical projects

MAIN PROJECTS

e-Focus | Next.js, Node.js, SQL

November 2024 – March 2025

- Developed and maintained the e-commerce front-end using Next.js, implementing features like a virtual fabric showcase and dynamic cart management.
- Refactored legacy backend services from Node.js, improving system performance, maintainability, and code quality.
- Integrated the platform with SAP ERP, ensuring real-time synchronization of pre-orders, inventory, and customer data.

Bullet Speel: The John and Mary Odyssey | Godot, GDScript, MongoDB

July 2024 – January 2025

- Led the technical development of a cross-platform 2D top-down game for Desktop (Windows, Mac) and Mobile (Android, iOS) using Godot Engine and GDScript.
- Architected core gameplay mechanics, including physics-based movement, combat systems, and collision handling.
- Developed advanced Enemy AI and Player mechanics utilized a Finite State Machine (FSM) architecture to manage complex character behaviors and states.
- Designed and integrated dynamic level environments, optimizing rendering performance and asset management across target platforms.
